

In the Claims

Please add the following new claims:

---

1 19. A server system connectable to a network, comprising:  
2       program code for providing a producer interface that permits  
3 a user to indicate an insured and that includes a list of  
4 insurance types, and for permitting said user to select at least  
5 one of said list of insurance types;  
6       program code for associating said insured with said at least  
7 one type of insurance; and  
8       program code for providing a requestor interface that  
9 displays only the selected at least one type of insurance to a  
10 requestor in response to the association of the insured with the  
11 at least one type of insurance.

1 20. The server system of claim 19, further comprising:  
2       wherein said program code for providing said producer  
3 interface is further operable to input a selected minimum and  
4 maximum number of cancellation days;  
5       program code for associating the minimum and maximum number  
6 of cancellation days with the insured;

7       wherein said program code for providing said requestor  
8    interface further includes program code for inputting a requested  
9    number of cancellation days;

10       program code for comparing said requested number of  
11    cancellation days with said minimum and maximum number of  
12    cancellation days in response to said association of said insured  
13    with said minimum and maximum number of cancellation days; and

14       program code for generating an error message to said  
15    requestor interface in the event that said requested number of  
16    cancellation days is outside said minimum and maximum number of  
17    cancellation days.

1    21. The server system of claim 19, further comprising:

2       wherein said program code for providing said producer  
3    interface further includes program code for inputting an  
4    indication that the words "Endeavor to" may be omitted from a  
5    cancellation clause in a certificate associated with the insured;

6       program code for associating said indication with said  
7    insured; and

8       wherein said program code for providing said requestor  
9    interface further includes program code, responsive to the  
10    association of said indication with said insured, for preventing

11 removal of the words "Endeavor to" in a cancellation clause of a  
12 requested certificate of insurance associated with said insured.

1 22. The server system of claim 19, further comprising:  
2 wherein said program code for providing said producer  
3 interface further comprises program code for presenting a list of  
4 insurance options that includes general liability additional  
5 insured, general liability lessor additional insured, general  
6 liability vendor's additional insured, automobile comprehensive,  
7 automobile collision, automobile additional insured, automobile  
8 loss payee, other additional insured, other loss payee and other  
9 mortgagee, and for permitting indication of at least one of said  
10 list of insurance options;  
11 program code for associating said indicated at least one of  
12 said insurance options with said insured; and  
13 wherein said program code for providing said requestor  
14 interface includes program code, responsive to said association of  
15 said indicated at least one of said insurance options with said  
16 insured, for displaying only said indicated at least one of said  
17 insurance options.

1 23. The server system of claim 19, further comprising:

2 wherein said program code for providing said producer  
3 interface further comprises program code for inputting a revised  
4 additional insured wording to be included in a certificate of  
5 insurance for said insured;

6 program code for associating said revised wording with said  
7 insured; and

8 wherein said program code for providing said requestor  
9 interface further comprises program code for inserting said  
10 revised wording into a certificate of insurance responsive to a  
11 indication of an additional insured option within said requestor  
12 interface.

1 24. The server system of claim 19, further comprising:

2 wherein said program code for providing said producer  
3 interface further includes program code for inputting an  
4 indication that approval is required;

5 program code for associating said indication with an insured;  
6 and

7 wherein said program code for providing said requestor  
8 interface further includes program code for generating a request  
9 for approval in response to said association of said indication  
10 with said insured.

1 25. The server system of claim 24, further comprising:

2       wherein said program code for providing said producer  
3 interface further comprises program code for indicating an  
4 approver party;

5       program code for associating said approver party with said  
6 insured; and

7       wherein said program code for providing said requestor  
8 interface further includes program code for sending said generated  
9 request for approval to said approver party.

1 26. The server system of claim 25, wherein said generated request  
2 for approval includes an electronic message transmitted to said  
3 approver party, and wherein said request for approval further  
4 enables said approver party to view, change and approve a  
5 requested certificate of insurance.

1 27. The server system of claim 19, further comprising:

2       program code operable to construct a sentence by combining a  
3 number of predetermined phrases in response to selection through  
4 said requestor interface of at least one insurance characteristic,  
5 wherein said sentence is entered in a text field appearing on a  
6 requested certificate of insurance.

1 28. The server system of claim 27, further comprising:

2 program code operable to prevent certain predetermined words  
3 from being inserted through said requestor interface from  
4 appearing on said requested certificate of insurance.

1 29. A server system connectable to a network, comprising:

2 program code for providing a registered party interface,  
3 wherein said registered party interface is operable to input a  
4 first set of insurance requirements for a job;

5 program code for associating said first set of insurance  
6 requirements with said job;

7 program code for providing a requestor interface, wherein  
8 said requestor interface is operable to display said first set of  
9 insurance requirements for said job in response to said  
10 association of said first set of insurance requirements and said  
11 job, wherein said requestor interface is further operable to input  
12 insurance policy information; and

13 program code for comparing said insurance policy information  
14 with said first set of insurance requirements, and for generating  
15 a certificate of insurance within a message to a first registered  
16 party including the results of said comparison.

1 30. The server system of claim 29, further comprising:

2 program code for storing said insurance policy information in  
3 association with said insured;

4 wherein said program code operable to provide said requestor  
5 interface is further operable to input an identifier associated  
6 with said insured; and

7 program code, responsive to receipt of said identifier  
8 associated with said insured and said association of said  
9 insurance policy information with said insured, for automatically  
10 comparing said insurance policy information with said insurance  
11 requirements, and for generating a certificate of insurance within  
12 a message to a registered party including the results of said  
13 comparison.

1 31. The server system of claim 29, further comprising:

2 program code for storing said insurance policy information in  
3 association with an insured;

4 wherein said program code operable to provide said requestor  
5 interface is further operable to input an identifier associated  
6 with said insured; and

7 program code, responsive to receipt of said identifier  
8 associated with said insured and said association of said  
9 insurance policy information with said insured, for:

10                   a. automatically comparing said insurance policy  
11                   information with a second set of insurance requirements for  
12                   generating a certificate of insurance; and  
13                   b. providing results of said comparison of said  
14                   insurance policy information with said second set of  
15                   insurance requirements within an electronic mail message to a  
16                   second registered party associated with said second set of  
17                   insurance requirements.

1       32. The server system of claim 31, wherein said program code,  
2       responsive to receipt of said identifier associated with said  
3       insured and said association of said insurance policy information  
4       with said insured, is further operable to generate a certificate  
5       of insurance to a third party using said insurance policy  
6       information.
